

# Business Intelligence

Businesses everywhere are obsessed with data — how to find it, how to store it, and what to do with it. Data is often referred to as the new currency. Yet data alone, trapped in endless rows and columns without an easy way to understand it, is worthless. For business users, making data actionable requires visualizing the data so it can be easily interpreted. With S2K Analytics, you can leverage prebuilt dashboards and reports that will allow you to easily identify anomalies that could turn into significant business issues, identify and analyze opportunities and trends, communicate goals consistently with employees, and monitor performance against targets. Immediate access to ERP data has never been more vital to grow revenue, protect margins, and improve profitability. Regardless of industry, S2K Analytics gives everyone in your value chain the answers they need to excel in a highly volatile environment.

## Advanced Reporting

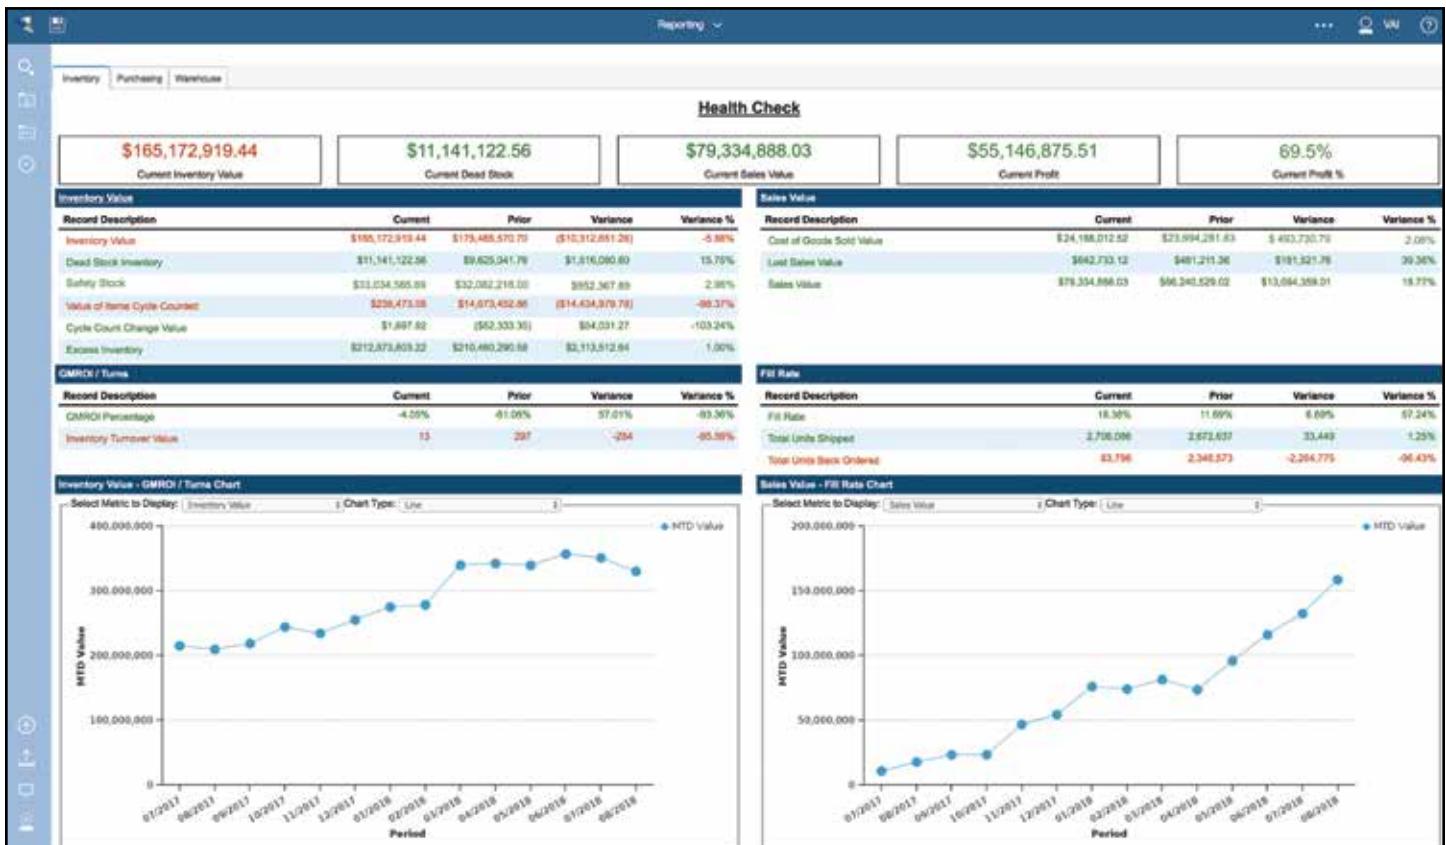

S2K Analytics comes preloaded with a wide variety of reports that mirror many of the financial, production, operational, and transactional reports in S2K Enterprise. In addition, non-technical users can use a simple, intuitive, drag-and-drop authoring tool to create custom reports to meet specific business requirements. The report writing tool leverages a prebuilt metadata model that presents information to users in business terms that they understand, so they can be productive right away. All reports can be published to the web, viewed in PDF format, downloaded to Excel Spreadsheets, or can be scheduled for email delivery.

## Health Check

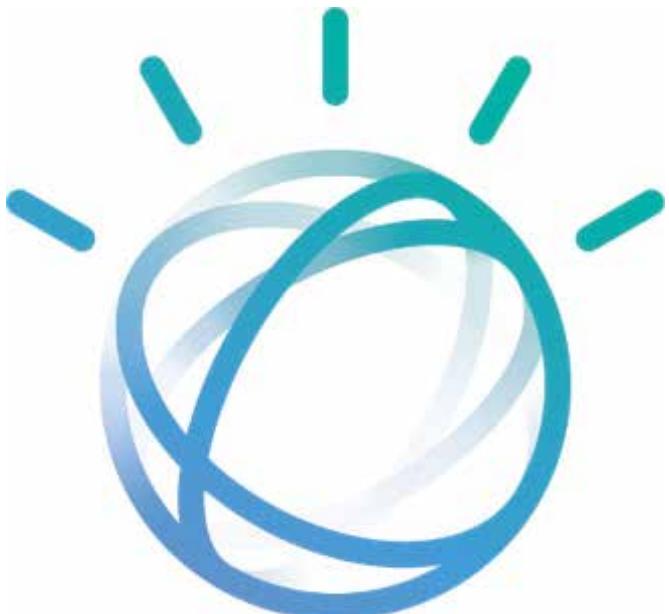

In today's highly competitive market, it is imperative that you constantly evaluate the success of the activities in which your business engages in over time. S2K Analytics "Health Check" provides your organization with both high-level monitoring that focuses on the overall performance of the enterprise, and low-level monitoring that focuses on departmental metrics such as:

- Inventory Turns and GMROI
- Customer Fill Rates
- Forecasted Demand vs Actual
- Picking and Shipping Performance
- Receiving and Put-Away Performance
- Vendor Performance

## Watson Analytics

IBM Watson Analytics is a smart data analysis and visualization tool you can use to quickly discover patterns and meaning in your data. IBM Watson Analytics collects your data, automatically organizes the data for you, then attempts to tell you what insights you can gain from the data. With guided data discovery, automated predictive analytics and cognitive capabilities such as natural language dialogue, you can interact with data conversationally to get answers you understand. Whether you need to quickly spot a trend or you have a team that needs to visualize report data in a dashboard, Watson Analytics has you covered.
