THE MARKET

Global mobile application market size is expected to reach \$407.31 billion by 2026. Mobile applications are designed to run on smartphones, tablets, and computer tablets, and function as a means for users to connect them to internet services to perform functions in a mobile environment.

Motivating Mobile App development is the increase in smartphone usage, the growing IoT market, and demand for apps such as games, media, social networking, and e-commerce, as well as the increase in the adoption of machine learning into mobile applications.

VAI's S2K Mobile Suite of applications offer the tools to help businesses improve efficiencies, enhance customer service, and increase sales. They provide file synchronization directly with S2K Enterprise and give users offline access to content when a network/wireless connection is unavailable.

"S2K Mobile has been a life saver. With visibility of inventory, customer sales, and accounts receivable on the go, I can have much more focused discussions with my customers and have more time to build my accounts and add value for them"

- Nicholas Hospedales, Director of Premium Beverages Division, A.S. Bryden & Sons

THE SOLUTION

With the rapid expansion of mobile devices, enterprises everywhere are being dramatically impacted by the new wave of mobile technology. VAI's S2K Mobile solutions turn ordinary smartphones into powerful business tools that can help you improve efficiencies, enhance customer service, and increase sales. Designed for smaller handheld displays and a touch-screen interfaces S2K Mobile has direct synchronization with S2K Enterprise and give users offline access to content when a network/wireless connection is unavailable.
